Dear Hiring Manager,

I am excited to apply for the Software Engineer position at your organization. With **3+ years of experience** designing and building scalable backend systems, I have developed expertise in delivering high-performance applications that power real-world products used by thousands of users.

Throughout my career, I have built production-grade applications using **Node.js, TypeScript, NestJS, ReactJS, PostgreSQL, Redis, MongoDB**, and **AWS**. I enjoy solving complex engineering problems involving distributed systems, microservices, performance optimization, asynchronous processing, caching, and cloud infrastructure.

At Tech Alchemy, I have owned critical backend services from architecture through deployment, collaborating closely with product managers, designers, and fellow engineers to deliver reliable and scalable solutions. Some of my key contributions include:

- Reduced API latency from **60 seconds to under 2 seconds** by redesigning processing pipelines using AWS SQS and Node.js worker threads.
- Built scalable backend services capable of supporting **1M+ concurrent users** through optimized database indexing, Redis caching, and horizontally scalable architectures.
- Designed distributed event-driven systems using PostgreSQL, Redis, MongoDB, WebSockets, and AWS services to ensure reliability, fault tolerance, and zero data loss.
- Optimized large-scale data processing using streaming techniques, significantly improving memory efficiency and application performance.

Beyond writing code, I enjoy taking ownership of products, mentoring teammates, participating in architecture discussions, and continuously improving engineering practices. I thrive in collaborative environments where solving challenging technical problems and delivering business value go hand in hand.

I am particularly excited about the opportunity to contribute to your engineering team by building reliable, scalable, and customer-focused software while continuing to grow as a software engineer. I am confident that my technical expertise, problem-solving mindset, and passion for building high-quality systems would make me a valuable addition to your organization.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience, technical skills, and enthusiasm can contribute to your team's success. I look forward to hearing from you.

Sincerely,

Aman Jaiswal
