Skills

Languages: JavaScript, TypeScript, Python, SQL

Backend: NodeJS, ExpressJS, NestJS, PostgreSQL, MySQL, MongoDB, Redis, Socket.IO, Websockets

Frontend: ReactJS, Html, CSS, NextJS, Angular

Cloud & DevOps: AWS, EC2, S3, SQS, Lambda, CloudWatch, Docker, Nginx, PM2, Grafana, Firebase

Work Experience

Tech Alchemy, Pune

June 2023 – Present

Software Development Engineer

- Reduced API latency from 60s to 2s by offloading heavy write operations to NodeJS worker threads and AWS SQS, ensuring reliable async processing with zero data loss at high throughput.
- Implemented cross-region database replication to reduce read latency and offload traffic from the primary database, improving scalability under high read loads.
- Cut response times on million-record datasets via Redis caching and optimized database indexing for high-scale user queries.
- Replaced in-memory file loading with NodeJS streams for chunked CSV processing, eliminating memory bottlenecks during heavy data ingestion.
- Owned production REST APIs end-to-end – resolving data consistency issues across horizontally scaled services and load testing to sustain 1M+ concurrent users and 10k+ daily actives.
- **Skills:** NodeJS, TypeScript, AWS (SQS, EC2), PostgreSQL, Redis, NestJS, MongoDB, ReactJS

Project Work

Web3Toolkit:

[Link](#)

Fault-tolerant Web3 payments platform with real-time notifications and on-chain analytics dashboards.

- Solved inconsistent real-time notifications across horizontally scaled instances using a Redis Pub/Sub fan-out architecture fed by MongoDB change events via AWS SQS.
- Built a monorepo microservices backend (NestJS, ExpressJS, PostgreSQL, Redis, SQS) integrating blockchain contracts via WebSockets, Ethers.js, and Web3.js.
- Architected a fault-tolerant event ingestion pipeline decoupling blockchain listeners from processing via SQS, enabling durable replay/backfill and eliminating data loss.
- Built React-based client CRM dashboards visualizing real-time on-chain transactions, revenue, and country-wise participation metrics.
- **Skills:** NestJS, ReactJS, PostgreSQL, SQS, Redis, Socket.IO, Web3.js, MongoDB, JWT

AreYouIn:

[Link](#)

Social event-planning app for creating events, inviting friends, and getting personalized recommendations.

- Re-architected backend for a mobile and web app covering registration, login, event creation, friend invites, recommendations, and personalized rankings.
- **Skills:** NodeJS, MongoDB, PM2, Redis, JWT

Education

GNIT Kolkata

April 2019 - May 2023

B.Tech. in Computer Science and Engineering

CGPA: 8.45/10

Relevant Coursework: Object Oriented Programming, Databases, Data Structures and Algorithms, System Design
